Find the hash of the commit you want to rollback to by using the `git log` command. This will display a list of commits along with their hashes. Copy the hash of the commit you want to rollback to. [Use the git reset command along with the hash of the commit to reset the repository to that commit.](#) Feb 28, 2023

### Undoing Changes in Git

The preferred method of undoing shared history is `git revert`. A **revert** is safer than a **reset** because it will not remove any **commits** from a shared history. A ...
