GitHub

In this article, I will talk about customizing the landing page of GitHub. We normally have a common landing page that basically displays the few selected repositories followed up with the commit-graph. As a developer, we want an eye-catching landing page that reflects a few interesting facts about our work and many more. So, here I will guide you to set up an awesome display for your GitHub Landing Page.

STEP 1:- Creating a Repository.

GitHub provides a special Repository to all its users. So, create a repository with the same name as your GitHub profile username.

Suppose your GitHub Profile URL is https://github.com/sakigo9

Then, create a repository with the name *sakigo9. This will activate your special repository.*

· · ·

STEP 2:- Creating the README.md file.

After you are done with making the repository then the next step is to create a README.md file for that same repository.

· · ·

STEP 3:- Copy the code given below and edit it according to your need.

Subscribe to get an email whenever Sakig publishes.

```
1    ### Hello World 👋 It's [Saket!](https://sakigo9.github.io/MyPortfolio/)
